

BORIS2

Webinar

Tackling Urban Disaster Risks: Barriers, Data Needs and Frameworks in a Multi-Hazard Context

January 30, 2025
10 - 11.30 am (CET)

MS Teams
([registration required](#))

Target groups:
urban planners, policy-makers, researchers, practitioners involved in DRR, urban resilience, and emergency management

In this webinar, we will delve into disaster risk management (DRM) in the urban context, focusing on the challenges and solutions involved in managing risks across multiple hazards. Drawing insights from the countries in focus in the EU research project BORIS2, we will briefly overview existing data, processes, and institutional frameworks, highlighting both procedural strengths and barriers. We will shed light on the specific needs and requirements necessary to enhance the urban system efficiency in emergencies, drawing from the research project and hands-on experience.

Participants will gain valuable insights into how different national frameworks address multi-risk environments and the opportunities for improving DRM strategies in urban contexts.
